WALT: use features of a non-chronological report.

Today we are going to write the last paragraph of our non chronological report.

Who do humpback whales live with?

Wonderful Whales

If you're looking for some wonderful whale facts then you've come to the right place! Humpback whales are huge mammals that are powerful and talented swimmers. Did you know that humpback whales love singing to each other? Read on to find out lots of wicked, wild and whale-tastic facts!

What do humpback whales look like?

These enormous sea creatures can grow up to 19 metres long. They have huge, strong fins that they use for swimming, turning, and leaping out of the water. These powerful swimmers are dark grey or black like scot and they have white patches on their stomachs. They have a blowhole so they can breathe and they can squirt water powerfully out.

Fun Facts!

Population 80,000 worldwide
Length up to 19 metres
Weight 30,000 kg
Lifespan 50 years
Distance swim 11,000 miles

What do humpback whales eat?

Humpback whales are known for eating small fish, krill, salmon, herring and other small prey. They don't have teeth so they have to swallow their food whole! They hunt in groups and make loud noises and slap their fins to scare their prey.

Where do humpback whales live?

These super swimmers live in oceans all over the world. They migrate from cold places in the summer to warm places in the winter where they raise their offspring. Humpback whales can swim up to 11,000 miles!

Who do humpback whales live with?

Humpback whales usually travel alone or in pods of

2 or 3. They sing whale songs to communicate and a song can last for up to 20 minutes! Whales also communicate using lunging, tail slapping and breaching water. Calves (baby whales) stay with their mum until they are around a year old.
